

# Get A Room!

Meeting rooms on the fly!

## Information

Get a Room! is a software designed to make booking meeting rooms easy at the office. It's a progressive web application that can be used either on the browser, or as a native application.

Features include:

- Login with Google SSO
- Setting and editing office preference
- Booking rooms to Google calendar
- Editing and deleting current booking

Used technologies:

- Frontend: React, material UI, TypeScript
- Backend: Nodejs, Express, TypeScript
- External dependencies: Google Workspace

Software was developed during fall of 2021 as a student project for Vincit. Some employees started using the application once it was completed.

## Project members
